

WEB APPLICATION - SKILL / JOB RECOMMENDER

In today's society, finding a job might be very difficult. People lack a clear understanding of how to select a job that is ideal for them based on their skill set because different jobs require different skill sets. People can apply for jobs that are in their best interests rather than applying for jobs that are inappropriate for their skill set .

Therefore, skill/job recommender is helpful in assisting people in finding the occupations that are most suited for them.

The functions of the web application include:

1. Aspirants can register themselves in the portal and access all of the job possibilities that are available for their level.
2. Mail confirmations are provided following a successful registration.
3. Job openings are updated, and there are many possibilities available.
4. Candidates may apply for the positions in which they are interested.
5. Notifications regarding applications for employment are sent by mail.
6. There is also a chatbot that can assist with common questions (frequently asked questions)
